

FACILITATING THE USE OF ALIASES DURING THE
DEBUGGING OF APPLICATIONS

Abstract of the Disclosure

The use of aliases in the debugging of applications is facilitated. Aliases are used in debugging, even when the aliases are not known to the debug generation stage of the compiler. That is, aliases are used in debugging, even when debug information is not generated by the compiler for the aliases. In order to use the aliases in debugging, the aliases are resolved to their formal names, and then debug information corresponding to the formal names, and thus, the aliases, is obtained.
